

PEN-92-4  
-29.26M water depth

LATITUDE: 30:02.34  
LONGITUDE: 87:25.10

LOCATION: Outer continental shelf offshore Florida Panhandle  
between Perdido and Pensacola Passes, Alabama /  
Florida

Unit 2 0-246 cm (2.46m)

Light greyish tan massive medium grained, sub-rounded to sub-angular  
quartz. sand with small shell bits throughout. Pecten shell @108 cm.

Unit 1 246-311 cm (0.65m)

Graded bed.

Facies a (246-300cm) 0.54m

Light greyish tan massive shelly medium to coarse quartz sand that fines  
upward.

Shells consist of reworked bi-valves with sharp edges.

Facies b (300-311cm) 0.11m

Reworked shell fragment layer with a medium to coarse quartz sand matrix.  
Shells range in size from 1 to 4 cm. Some shells have angular edges and are  
fresh whereas others are well worn and bored (longer residence time).
