			<p>reversed the tubes on the table during sampling. This caused a disjointed sampling event because there were four five-foot tubes and the tops and bottoms did not match up correctly. The original log was redrawn to correct this situation, but the samples remained from the original, incorrect intervals. Their depths have been adjusted to account for the mix up. The lab sample intervals are incorrect; they match the original sample intervals.</p> <p>4. Seafloor elevation determined from USACE hydrographic survey completed April 2014.</p>

NOTES:

1. Soils are field visually classified in accordance with the Unified Soils Classification System.

2. NS = Sample not submitted for laboratory analysis from this interval.

3. Seafloor elevation calculated using sampling vessel's fathometer water depth reading and applying NOAA tidal gauge data conversion factor.
